

# A HEALTH RESEARCH LIBRARY IN THE NORTH!

## *Seeking Donations of Books & Other Materials*

The Institute for Circumpolar Health Research has begun development of a library collection of publications on circumpolar health. We are working to bring together a collection of the health research done in the North for Northerners. Many publications documenting Northern health research and programs over the past several years are difficult to locate or are not found in the North. We want to change this.

How can you help?

- ✧ Add us to your mailing list for recent and upcoming publications
- ✧ Let us know which reports you worked on or publications that you used for circumpolar health research
- ✧ Send us bibliographies or lists of references
- ✧ Donate materials you have to us

The emphasis of the collection is circumpolar health research – past and present – and we are particularly interested in ‘hard-to-find’ reports, dissertations, books, and community-based or regional studies done in English throughout the international circumpolar health community.

We are also establishing a historical circumpolar collection to collect works related to all circumpolar research, science and exploration. Publications documenting the establishment of research institutes and policies in circumpolar regions are also welcome.

We’ve just begun... we will continue to develop this resource over the coming years.

The official launch of this new library will be in January/February 2010. Donors who assist us before December 31, 2009 will be acknowledged at the official launch to be held in Yellowknife, NWT.
